

Hi,

This is Heera Singh Daspa, an IT/ITES professional, currently working in e-learning sector with Next Education India Pvt. Ltd. I am 28 years old and married. This was in January 2013 when I was diagnosed with chronic kidney disease. Honestly, it was difficult for me, my wife and our families to believe that it could happen to me at such an early age. However, valuable guidance, knowledge and expertise of Dr. Priyadarshi Ranjan (MS (Surgery) MCh (Urology) PGI Chandigarh, Consultant Urologist and Chief Kidney Transplant Surgeon Fortis Hospital, Mohali, Chandigarh, India.) made us believe that there is still life after this and post transplant I could lead to a normal life. True it was, now post 4 months my belief still getting stronger and stronger as things are getting better day by day since the day of Surgery.

Not to forget that how co-operative, professional & patient friendly Dr. Priyadarshi Ranjan has been. I could thank him not enough and not just for doing the transplant with great expertise & care but also for sharing great awareness towards the disease, which mostly people in India still believe that it is not curable and there is no life after that.

If anything in Fortis I truly appreciate then it would this person who did not just become a doctor/surgeon but the one who could make a difference in people's approach towards treatment. Today, I am back to what I should be doing at this age and all credit goes to him, my sister (who did not care about her life and gifted me another life), undistinguished care, love by my wife & extraordinary support of our parents.

Regards,
Heera
